For the amount of: _____ GST: _____ Total : _____

GST number : 741340921RT00001

Paid By: _____ Date : _____

Additional payment info: _____

If this puppy is being sold as a “tiny” puppy, estimated to remain 7-9lbs at maturity, you will be refunded \$100/lb if your dog exceeds this estimate at one year of age, until our typical puppy price of \$2500 is reached. **ESTIMATED WEIGHT RANGE:** _____

This puppy has been vet checked by Didsbury Veterinary Clinic and found to be in perfect health. This puppy can be returned within a month for a refund of the balance of the payment, minus the deposit. Refunds will be given following a 7 day assessment. If the puppy is found to be in poor health and needing veterinarian intervention within 48 hours of a puppy return, the refund will be adjusted accordingly. A refund may not be offered if the puppy has been found to have contracted a contagious illness, due to lack of quarantine or proper immunizations, or injured in the adopters care. We will still offer a refund beyond a months time, but it will depend on the age and condition of the puppy, so the refund offered will be on a case by case basis following an assessment.

We offer a two year genetic warranty covering any genetic condition projected to dramatically decrease the dog’s life expectancy, provided our vet agrees with the genetic nature and the severity of the diagnosis. We will not reimburse/cover treatment or diagnostic costs and may require that the dog be examined by our vet in order to activate the warranty, at the owner’s expense. A puppy of equal value will be offered that can be claimed at any time by the adopter, provided we are still breeding and producing litters. There is no need to return the original dog. Baby Barks genetic health warrantee does not cover any bite abnormalities or teeth issues. Please contact us if you experience health concerns with your dog as we endeavor to breed the healthiest dogs possible. If adopters keep us updated with major health changes in their pets, we are better able to adjust our breeding program accordingly to reduce these occurrences.

Initial:

This dog is being sold on a spay/neuter contract and the adopter agrees to spay/neuter their puppy by 7 (seven) months of age.

Initial:

“I have been informed about the risk of hypoglycemia in small breed puppies. I have been given info regarding the signs and symptoms and I am aware that over handling, stress, hypothermia and lack of nutrition can result in a hypoglycemic episode for my puppy. I further understand that if left untreated, my hypoglycemic puppy could begin to seizure and ultimately perish. I am aware that ensuring my puppy eats and rests regularly after joining me in my home and that treating a hypoglycemic puppy with corn syrup or seeking vet attention may save my puppy’s life.” Please contact Baby Barks if you have concerns.

We would love to have the dog returned to us at any point during its lifetime, if the purchaser can no longer provide care. We always want to know that our puppies and our families are happy. We’d love to assist you in anyway, at any time. Thank you for adopting this puppy and please keep in touch.
