

August 4, 2022

I first met Karen Miller who is the owner of Baby Barks, in 2017 when she became a client of mine and of Didsbury Vet Services. Even back then, I was impressed with her program and that sentiment has only continued to grow over the years of working with her. I routinely go out to her place and every time it is always immaculate, and the dogs are always very healthy and happy. The building where the dogs reside is bright, clean and very welcoming. The set up inside for the puppies is brilliant, so spacious and the puppies definitively thrive in it! The puppies are always well socialized, clean and in excellent health.

The adult dogs are so well taken care of- they have a large indoor area that they share with their friends as well as access to huge outdoor runs if they want to go outside. She also had the perimeter of her property fenced in a way to protect the dogs so that she can take all the dogs for off leash daily adventures.

Her health program is one that she has worked with us over the years to develop. We routinely examine all adult dogs for checkups and she has them on a program to make sure routine dental cleanings are scheduled for the adult dogs. Any health issues that arise (of which there are very few), Karen is quick to have them examined by us and does whatever it necessary to get them back to good health. All puppies are on a deworming program and will have received an individual check up by our clinic as well as their first set of vaccines prior to going to their forever families.

The longer I have worked with Karen, the more I am impressed with what an ethical and knowledgeable person she is in regards to care and in breeding quality family pets. I am proud to partner with her through offering veterinary care to her dogs.
